E/W

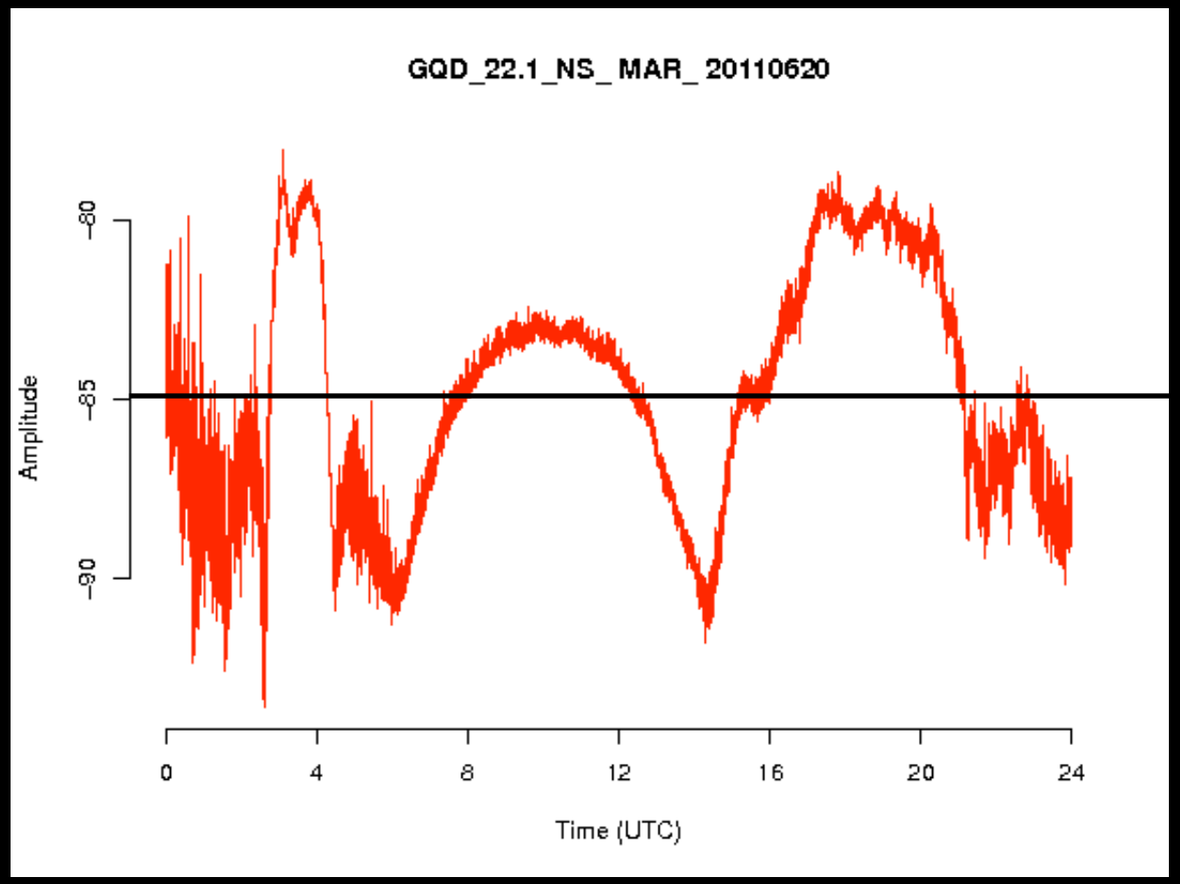
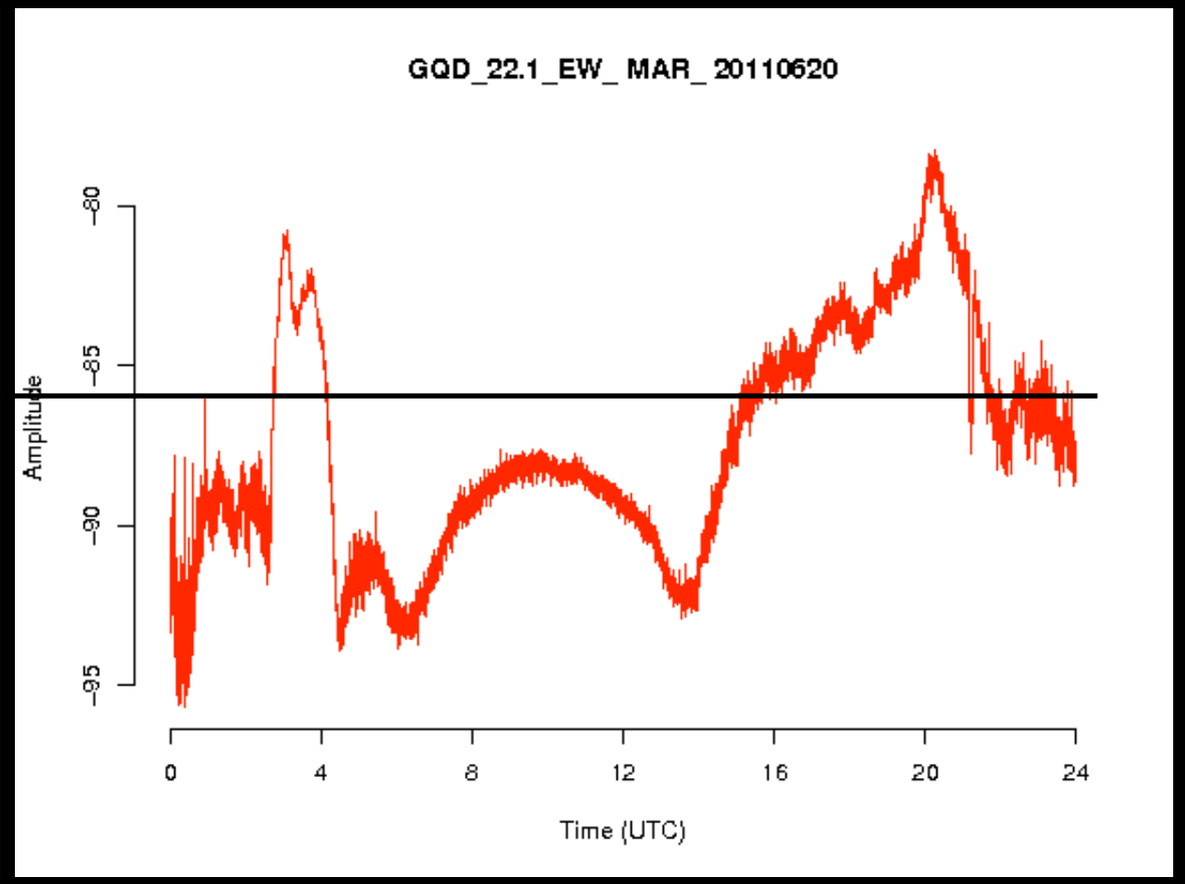
20/06/2011





21/06/2011

VTX 18.2 stronger in NS
HWU 18.3 stronger in NS - baud not specified in specs - recorded at 200
GQD 19.6 strength comparison senseless - frequency spectrum for loops look different - peak frequency observed as 19.575 in averaging process

NWC 19.8 stronger in EW
ICV 20.27 MSK recording command line parameter rejected - 20.27 - no data recorded
HWV 20.9 stronger in NS
NPM 21.4 almost even strength in loops - different signals on different days - EW signal more present in averaging

GQD 22.1 stronger in NS
JJI 22.2 cleaner in EW - especially in the early morning
DHO 23.4 stronger in NS - different signals on different days
NAA 24.0 stronger in EW - different signals on different days
NLK 24.8 stronger in EW
NML 25.2 stronger in EW
TBB 26.7 stronger in NS (partially incorrect filename on present images: ie NPM_26.7_NS_MAR_20110620.png should be TBB_26.7_NS_MAR_20110620.png)
